

## Nuuanu Pali Stream Rehabilitation

The Nuuanu Stream Emergency Repair project, being completed by Koga Engineering, is an extensive rehabilitation of the streambed that will help control dangerous flash – floods that often sweep through the area. The scope of this project includes the re-installation of three hundred linear feet of concrete channels. To keep the worksite dry, the bulk of the stream's flow is channeled through 60" HDPE pipe, while a CD103M Critically Silenced pump moves the remaining flow around the site and through clarification before discharging downstream. The Koga crew has overcome many challenges including two flash floods.

## CD 103M Pump - 69 dBA at 30 feet

The Godwin Dri-Prime 4" CD103M Critically Silenced automatic priming centrifugal pump is a highly maneuverable portable trash pump with flow capabilities to 1,000 gpm, total dynamic heads to 170 feet, and solids handling to 3" in diameter. The unique Godwin venturi air evacuation system allows the CD103M CS pump to prime from dry conditions with suction lifts up to 28 feet. Perfect in intermittent flow situations, the CD103M CS can run dry indefinitely without damage due to the oil bath mechanical seal design. Sound levels are approximately 69dBA at 30 feet..
